PART F - SPECIFICATIONS

SPECIFICATION TITLE:	MONITORING SEEDING SUCCESS OF TREATED AREA	AGENCY:	BLM Elko F.O.
PART E LINE ITEM:	M-2b Monitoring and Evaluation of Emergency Treatments (BLM 98-148 III. V)	FISCAL YEAR(S) (list each year):	2001, 2002, 2003

I. WORK TO BE DONE

Number and Describe Each Task:	
A. General Description:	Conduct re-seeding monitoring each year following treatment (2000-2002) to determine success of revegetation efforts on the Elko 13 Fire Complex. Utilize "Fregdens" Techniques or similar methods established for seeded areas. Use production/site composition methods for areas managed for natural release. A resource specialist from each Field Office will provide program oversight for this specification .
B. Location/(Suitable) Sites:	Establish monitoring transects within all seeded areas and within areas managed for natural release in each plant association type reseeded in 2000-2002. Final site selections to be made by a BLM representative.
C. Design/Construction Specifications:	Monitoring transects shall be established and methodologies designed to determine: <ul style="list-style-type: none"> a. A minimum seedling establishment of 3-4 plants per square meter. b. Sampling should determine species composition or density. c. Count seedlings/square meter - Seeded species/Native Species/Total # and compare to seeding rate square meter for treatment success. d. Monitor cover of vegetation, litter, rock, bare ground, and cryptogamic crusts. f. Sampling methodologies shall represent all plant community types, all aspects, and all slope variations within the seeded areas. Photos shall accompany data records as supporting documentation of findings. g. Observations should be documented both in written and photographic documents to record other factors such as herbivory, surface erosion, etc. h. A final report shall be published that documents sampling methodologies, techniques, areas sampled, and summary of findings.
D. Purpose of Treatment Specification:	Monitoring is required to ascertain reseeded success and effectiveness to meet the objectives that the BAER team identified and mitigate the identified emergency to the degree anticipated. Ensure establishment of reseeded species for soil stabilization and watershed protection.
